¹ Comment provided by the Department of Public Works:

Although we understand the need for appropriate roadway standards in rural and agricultural areas, we believe that the minimum pavement width for minor and cul-de-sac roadways should be 20 feet. This allows a minimum standard for safe passage of two-lane, two way traffic. Collector standards should be slightly wider, since it does carry additional traffic at higher speeds. A 22 foot minimum for collector roads should be sufficient for Rural and Agricultural Districts. While a gravel surface for a dead-end street does convey a more rural feel, it does present a recurring maintenance problem. Thus, we would not recommend such roadways for dedication to the County and instead recommend that ownership be kept private.
