

How can I tell if air bubbles are causing my water to look milky?

There is a simple test you can perform to verify if the milky water is due to air bubbles. First, fill a clear glass with cold water from the tap and then set it on a counter top or table. Observe the glass, the milky appearance of the water should begin to clear from the bottom of the glass as the air bubbles rise to the top of the glass. After several minutes most of the air bubbles will have disappeared and the water should look clear.
